PROFESSIONAL SUMMARY

Technical Software Engineer and AI Builder with strong foundations in Data Structures, Algorithms, Object-Oriented Programming, and System Design. Proficient in Python, SQL, and Full-Stack Engineering with a deep focus on Machine Learning, Deep Learning, and Large Language Models (LLMs). Experienced in developing context-aware AI systems, optimizing retrieval pipelines, and architecting data-driven software solutions. Passionate about building and deploying production-ready AI solutions for complex, real-world public-sector and governance challenges

EDUCATION

Maharaj Vijayaram Gajapathi Raj College

Aug 2023 – May 2027

B.Tech, Computer Science & Information Technology | CGPA: 8.96 / 10

Sri Chaitanya Junior College

Jun 2021 – Apr 2023

Intermediate (MPC) | Percentage: 96.8%

TECHNICAL SKILLS

Programming Languages: Python, C++, Java, JavaScript, C

Frontend Development: React.js, HTML5, CSS3, JavaScript

Backend & Databases: Firebase Firestore, MySQL, SQL

DevOps & Tooling: Git, GitHub, VS Code, Linux, Figma, Google Colab

AI / ML Frameworks : NumPy, Pandas, Scikit-learn , CNN's, Random Forest, XG-Boost, RAG pipeline

Core Concepts: Data Structures & Algorithms, OOP, DBMS, Operating Systems, System Design

PROJECTS

Campus Placement Portal System

- Engineered a resume-scoring engine combining keyword matching with weighted scoring across **12 parameters**, returning candidate-job fit in under **2 seconds** per resume.
- Delivered automated skill-gap analysis, match scores, and personalized job recommendations to the entire **300+ student user base**, raising relevant application rate by an estimated **40%**.
- Architected role-based access (student/admin) on Firebase Authentication and Firestore security rules to safeguard all stored profiles.
- Shipped a live application tracker driven by Firestore listeners, removing page refreshes and cutting status-check time by **~60%**.
- Designed a rule-based chatbot that resolves **15+ recurring placement queries**, lowering administrative workload by roughly **30%**.

AI Invoice Analyzer with RAG and Fraud Detection

- Built an AI-powered invoice analysis system using OCR, NLP, RAG, and ML to extract and understand structured invoice data and enable natural language querying.
- Achieved **~85%+ text extraction accuracy** using OCR + preprocessing and **~89%+ field extraction accuracy** for key entities like vendor, total amount, GST, and invoice date. Implemented a **fraud detection** module combining rule-based checks and **ML classification**, achieving **~84%** accuracy in identifying suspicious invoices with explainable risk scoring.
- Integrated a **RAG-based chatbot** (FAISS + LLM) enabling context-aware Q&A with sub-second retrieval latency for invoice-related queries.

EXPERIENCE

Salesforce — CRM & Cloud Intern (Virtual)

May 2025 – Jul 2025

- Automated 5+ CRM workflows using Apex and Flow Builder, reducing manual effort by ~40%
- Delivered 10+ Salesforce configurations and solutions based on business requirements
- Improved CRM process efficiency through rule-based automation and data handling
